

## EDS – EXPERT ON LINE DIAGNOSTIC SYSTEM FOR SUBSTATION EQUIPMENTS

With 70 years of experience ISA is a market leader in the development of instrumentation to address the specific needs of the power utilities.

**EDS – Expert On Line Diagnostic System for substation equipments** is a cost-effective online diagnostic system used to monitor electrical apparatus in the field. Each EDS device is intended to be apparatus-specific and can be mounted in existing cubicles or in optional cubicles available from ISA.

EDS units are designed to **continuously monitor** the condition of:

- High Voltage and Medium Voltage Circuit Breakers
- Current and Voltage Transformers
- High Voltage Surge Arrestors (MOV's)

The EDS is easy to install and, once configured, operates continuously. EDS units are designed to operate reliably under extreme weather conditions and electrical interference found in normal substation operations.
