New CBA 2000 - Advanced Circuit Breaker Analyzer

ISA announces the new CBA 2000, the most powerful and advanced circuit breaker analyzer available today in the market.

After the successful CBA 1000, that within 18 months from the first launch, has been selected by several international Utilities and Manufacturers as the standard test set for Circuit Breaker testing, we are now introducing the new CBA 2000.

The CBA 2000 has the following main features:

- 2, 4 or 6 Breaks per phase (up to 18 Main and 18 PIR contacts).
- 4, 8 or 12 Auxiliary timing inputs.
- Up to 4 trip/close coil command.
- 3 Travel transducers inputs.
- 2 general purpose analog inputs (Battery Voltage measurement, Motor Current measurement, First Trip test, pressure measurement, etc.).
- Built-in 200 A Microhmmeter for Dynamic and Static Resistance Measurement.
- Built-in Minimum Trip Voltage test.
- Large graphical high brightness sun-light display.
- Up to 500 results and 64 test plans saved into the internal memory.
- Pen Drive interface to download results and test plan.
- Light and compact: only 13 kg .

CBA 2000 is compatible with the BSG unit for testing circuit breakers with both side grounded and for testing circuit breakers using Graphite nozzle.

CBA 2000

The software package to set up the test, to download test results and to generate professional test reports, is the standard well known TDMS (Test and Data Management Software) with CBA2000 enhancements.

CBA 2000 is available for delivery and for field demonstration from January 2008.

Please feel free to contact us for any further clarification or additional information.
